

# ANYCUT

## CONVENIENT CO2 LASER LABEL FINISHER

### ANYCUT Compact desk-top laser label die-cutter

ANYCUT is the world-first desktop size air-cooled CO2 laser die-cutter as a complete label finishing system. Galvano scanning covers 200mm width at a time with constant power without length limitation.

**NSI 4 Africa**

- Max web width : 215mm
- Max web speed : 18m/m
- Max roll diameter : 300 mm
- Permanent lifetime of CO2 laser
- Max. cutting width : 200mm
- Very long labels can be cut by splitting.
- Cooling : air-cooled method
- Full option : laminating, die-cutting, slitting, matrix removal, trimming and etc.
- Laser : Sealed CO2 70W, 10.57 – 10.63 um
- Multifunctional : full cut, half cut, (variable data) marking, watermarking, preformation and etc, at the same time.
- Compact size : D1620 x W630 x H503 mm / 190 kg

**5,000 labels can be cut within one hour without retooling.**

Without retooling for cutting, 5,000 labels can be cut within one hour.

**The combination of the latest laser technology and vision system guarantees the quality of labels.**

Cutting can be performed at precise locations using a small laser beam and a vision system.

In addition, consistent levels of label quality can be guaranteed by minimizing the errors that occur during cutting.

**Time and costs can be reduced by performance that serves a triple purpose.**

A single cutting can perform laminating and the removal of scrap papers simultaneously.

Laminating films can increase durability by protecting the surface of labels and enhance the level of luster.

In addition, only final labels can be handily produced through the removal of scrap papers.

**You will become an expert with only a short-term education.**

Easy cutting is realized through the simple installation of roll labels and our custom software.

**Production is possible without concerns about space.**

any-cut does not require a large space. It can be installed in a small space and cutting can be done whenever necessary.

**Cutting and marking can be performed simultaneously.**

In cutting labels, necessary information such as barcodes, numbering, QR codes, date and time can be directly marked on the labels through an exclusive software program.

**Full and half cuts can be performed simultaneously.**

Various cutting tasks can be produced within a single label printing operation.

**Various media in terms of thickness and type can be supported.**

As the laser can set up the degree of cutting by fine control of intensity and speed, labels can be cut in various patterns in the medium as desired by users.

**Long labels can be cut automatically.**

Labels with a maximum length of 1.2m can also be cut by our software.

**Labels with highly complex images can also be cut speedily.**

Various images ranging from simple rectangles and circles to complex cuts such as stamp shapes can be executed easily and speedily.

**Concerns over consumable costs such as the replacement of knife edges are no longer necessary.**

In the case of die cutting using knives, the abrasion of knife edges requires frequent replacements. However, Any-cut does not incur consumable replacement costs.

**Laser system**  
Accurate cutting is possible using the latest laser engine.

**Lamination unit**  
Laminating is possible.

**Lamination matrix removal**  
Laminated scrap papers can be easily removed.

**Unwinding system**  
(215mm max web width)  
The media roll can be easily installed.

**Vision system & Blackmark sensor**  
Label location accuracy is assured.

**Matrix removal**  
Scrap papers can be easily removed.

**Rewinding system**  
(215mm max web width)  
Completed labels can be easily wound.

**Safety switch panel**  
Secure operating is possible with various safety device in certification standard.

**Operation panel**  
The operation is convenient. Anyone can be an expert with only a short-term training session.
